Sony heeft de Xperia 5 IV-smartphone aangekondigd. De telefoon, die volgens de fabrikant 'compact' is, komt over twee weken uit voor 1049 euro. Ten opzichte van de voorganger is er een accu met meer capaciteit in de kleinere behuizing te vinden. De Xperia 5 IV heeft een 5000mAh-accu, ten opzichte van de voorganger van 4500mAh. Ten opzichte van de voorganger is er bovendien ondersteuning voor draadloos laden toegevoegd. Het scherm is bij benadering even groot gebleven en heeft dezelfde resolutie en verversingssnelheid: 1080p en 120Hz. De 5 IV beschikt over de Snapdragon 8 Gen 1-soc van Qualcomm en niet over de nieuwere 8+ Gen 1. Ten opzichte van de 5 III zit er bovendien een downgrade in het camera-systeem. In plaats van de camera met telelens met echte optische zoom heeft de Xperia 5 IV weer een camera met vast brandpunt. De camera met telelens reikt bovendien minder ver: 60mm, of 2,5x de primaire camera. De 5 III heeft een camera met telelens die van 3x tot 4,4x kan en tussen beide punten kan wisselen. De prijs is ook iets omhoog gegaan ten opzichte van vorig jaar: De adviesprijs komt uit op 1049 euro, in plaats van 999 euro. Telefoon worden sowieso iets duurder afgelopen tijd, maar niet veel. Sony brengt de telefoon over enkele weken uit in de Benelux, zo laat het bedrijf weten. Sony Xperia's 5 IV 5 III Formaat en behuizing 156x67x8,2mm, 172g, ip65/68 15,7x58x8,2mm, 168g, ip65/68 Scherm 6,1", 2520x1080px, 120Hz-oled SoC Snapdragon 8 Gen 1 Snapdragon 888 Geheugen en opslag 8GB/128GB 8GB/128GB Camera's 1, Primair, 12MP, f/1,7, 39mm² 2, Ultragroothoek, 12MP, f/2,2, 20mm² 3, Tele 2,5x, 12MP, f/2,4, 10mm² Front: 12MP, 15mm² 1, Primair, 12MP, 39mm² 2, Ultragroothoek, 12MP, f/2,2, 20mm² 3, Tele 3x/4,4x, 12MP, f/2,3, 19mm² Front: 8MP, 8mm² Accu en laden 5000mAh, 30W, draadloos laden 4500mAh, 30W Release en prijs September 2022, 1049 euro September 2021, 999 euro Google's Android 12 is now official, the software maker is already out under the Android Open Source Project (AOSP). Aside from the Pixel devices, Samsung and OnePlus's top flagship are also eligible to enjoy the latest version of Android via the beta testing program. Android 12 comes with a new user interface powered by Material You, smart features, a better and round UX design as well as numerous security enhancements over the previous version of the Android operating system. The Android 12 Beta program will be initiated by other Android users such as - Xiaomi, Oppo, Vivo, Realme, and other Chinese as well as international brands. Following a successful beta run, these device makers will send stable Android 12-based software skins to corresponding smartphones. However, different OEMs have their own rollout and upgrade processes. For instance, some rollout procedure to major version takes time, while some wait even to begin the testing activity. Still, there's another way that Android phone users can install the latest Android version using an "Android 12 custom ROM". There are plenty of developers on XDA that made this possible and brought you a collection of Android 12 custom software builds. Download Android 12 custom ROM, which enables you to flash your phone (eligible) with the Android 12 and install the latest software features on the devices. To be mentioned, the possibility of BUGS and Issues in these custom software is likely to be there because these aren't Official builds of the respective smartphone maker. Below you can download the latest custom Android 12 ROM. 1. Asus: 2. Lenovo: Lenovo Phab Plus Lenovo Z6 Pro 3. Motorola: 4. Nokia: Nokia 4.2 Nokia 6.1 Nokia 6.1 Plus Nokia 7 Plus Nokia 7.1 Nokia 8 Nokia 8.1 5. OnePlus 6. Realme: 7. Samsung: 8. Essential 10. Google 11. LG 12. Raspberry Pi Raspberry Pi 4 B, Pi 400 and Compute Module 4 13. Razer Razer Phone Razer Phone 2 14. Sony 15. HTC Some known issues on OnePlus Devices: Encryption is not working, so it is disabled. If you have /data encrypted, do not flash this ROM without formatting /data first. How to install these custom Builds on OnePlus: Backup everything. The provided zip can be installed using the TWRP recovery: clear data while doing that. The ROM expects the firmware from OOS 10.0.1: different firmware is not tested. GApps is not available for Android 12 yet. The provided recovery allows only flashing signed images: use TWRP if you need to flash GApps or different packages. If you want to keep the TWRP flashed, flash the persist\_twrp.zip provided here: And flash the TWRP image you prefer. Information regarding the Xiaomi Android 12 Custom Build: Features that are currently working on MIUI 13 build: Boots RIL (Calls, SMS, Data) Fingerprint Wi-Fi Bluetooth Camera Camcorder Video Playback Audio Sensors Flash LED GPS Volte Instructions : Download the latest build and GApps Reboot to recovery Flash proper vendor and firmware Flash the latest build and GApps Reboot AndroidAndroid 12 Custom ROMOnePlusOperating SystemSamsungxiaomi Google and several other smartphone manufacturers keep on bringing such devices that can benefit users in every manner. Giving a good start from the high-end models, the companies also release cost-effective devices with limited features that can fit into the budget of consumers. But looks like the new Google Mobile Services (GMS) policy with Android 13 might put these devices in danger with new requirements. According to the Twitter handle of Android expert Jason Bayton, Google has updated its minimum hardware requirements policy for the GMS (Google Mobile Services) with Android 13. Ultimately, devices must have more than 2GB of RAM and 16GB of storage to carry on the benefits of the Google Mobile Services. From #Android13, new devices with less than 2GB RAM cannot preload GMS. Any new Go devices must have at least 16GB storage. Devices not meeting these requirements today on 12 must not upgrade to 13. — Jason Bayton (@JasonBayton) September 7, 2022 This also means that those devices running on 2GB of RAM and having only 16GB of internal storage won't be able to enjoy the features of GMS. Alternatively, this statement opens the probability of such devices becoming a past thing, soon. Jason also mentions that fulfilling these requirements is quite important for the devices. Or else, they won't be able to greet the Android 13 on their doorsteps. Thus, if you want to upgrade your device to the latest Android 13 interface, make sure that your handset meets all the conditions for preloading GMS. Even if your Android device is eligible for Android 13, it won't receive the new update until it covers all the eligibility criteria regarding the GMS policy. Not for the first time! Yes, it's not the first time when Google has kept a barrier in front of the tech makers for preloading Google Mobile Services on low RAM models. The US company keeps on rejuvenating its policies so that the devices and applications could become compatible with the newest operating system. The company has taken the same step for the Android 11 devices as well. As a result, devices with less than 512MB of RAM would not be able to step into the preloading of GMS anymore. Hence to keep supplying the benefits of Google services to the consumers, smartphone companies have to offer a minimum of 2GB of RAM and 16GB of storage to their handy gadgets. [ Source ] Google has announced a handful of new features for Android users in 2022 ongoing year. Undoubtedly, these features are not only interactive with the device system but thoughtful for the daily life of users as well. Now you can turn on your tasks and manage several operations more efficiently. What are these new significant additions? Well, the list of Google Android 2022 features includes some easy-sharing tools, redesigned system applications, and better ways to operate your handset and smartwatches. So let's begin the exploration of these new and reflective functions of the Android interface. Share your files easily with Nearby Share Nearby Share - a new tool that lets you transfer your files and essentials to nearby Android devices (smartphones, tablets, Chromebooks). You can share the entire folder or customize the number of materials accordingly. Besides, it automatically transfers the files to other devices even if the screen is off. However, for enjoying this feature, you must have opted into the respective function. For doing so, make sure that your selected Android devices are logged into your Google Account on the sharing menu. Revamped Google Workspace Google has recently done some makeovers to its Google Workspace applications for huge screen devices. Thus, now users will be able to find larger and more effective widgets for Google Drive and Keep apps on their tablet screens. Further, this Google Drive Widget will provide you with one-tap access to Google Docs, Google Slides, and Google Sheets. Besides, the Keep app widget will bring huge space and font sizes for easy note-makings, to-do lists, reminders, and more. Emojify your Messages with Gboard Google now brings magic to your hands for expressing yourself. No need to jump into the emoji section and do a find and search for the emojis to express yourself. With the all-new Emojify feature, you can easily get the emoticons that you need to send without the extra effort of searching them. Just type your message and tap on the Emojify button. Select the preferable emoji and hit the send button. Currently, the feature is revolving in the Gboard beta, but soon the company will push it off to all the Gboard English consumers. On the other hand, now there are thousands of Emoji Kitchen stickers on Gboard. This bunch includes some new and different emojis that you can even share with your friends or colleagues residing in other parts of the world. Enjoy FaceTime with Google Meet Google Meet now brings a live sharing feature on its surface. As a result, you can watch YouTube videos, or play games with up to 100 members at the same time. Alongside, you will find a new multi-pinning feature to adjust your facetime screen and keep your focus on the essential parts of the meeting. New Accessibility Tools Now the Sound Notifications in the Live Transcribe and Notifications section can sense the emergent household alert. For instance, fire alarms, running water, door knocks, and more. Moreover, it will make a sound, or vibration, or flash the light and will caution you on your phone or smartwatch. Besides, you can customize the alert sound accordingly. The feature is quite helpful while using headphones, or when you are dealing with hearing impairment. On the flip side, for people with low vision, there is an Audio Description feature on Google TV. Ultimately, this function will narrate the visual details which will help you to understand what is going on in the scenario. You will also find an organized library of movies with audio descriptions on Google TV. Personalize your WearOS watch Now there is a new Keep feature in your mini handy gadget. You can easily command a note or checklist on your smartwatch without even using any other device. Another interesting point is that Google is soon going to introduce the Bitmoji feature on the WearOS watch face. You can use your avatar after crafting it on Snapchat or Bitmoji app and can use it with changing expressions. These are the new features that are making their way to your Android devices. Let's see what else we will grab in the time ahead. [Source] After the fruitful outcomes of Android 13, Google has started preparing itself for the tick-tacks of Android 14. No doubt, this time also we will find some dynamic changes on the upcoming interface core. Ultimately, this list of changes for Android 14 begins with the satellite communication feature. Two days ago, the Senior Vice President of the Google Platform and Ecosystem - Hiroshi Lockheimer tweeted some information on his Twitter handle. Consequently, this tweet has given us an idea of what the company is planning for the next Android version. Hiroshi stated that it's time to provide users with the better benefits of the satellite. Now the company has started walking on the paths of satellite communication for Android 14 and will soon come up with worthwhile results. Wild to think about user experiences for phones that can connect to satellites. When we launched G1 in '08 it was a stretch to get 3G + Wifi working. Now we're designing for satellites. Cool Excited to support our partners in enabling all of this in the next version of Android! — Hiroshi Lockheimer (@lockheimer) September 1, 2022 Satellite communication? Satellite communication generally plays a significant role in times of emergencies. For instance, if you get stuck in an inconvenient situation, then this feature will allow you to contact the helpful numbers immediately, even in network dead areas. Besides, Elon Musk also reported that the satellite communication feature allows you thousands of voice calls or text messages depending on the length of the content. Hence, it would be a quite thoughtful addition to the upcoming Android OS. So far, SpaceX and T-Mobile declared to bring the respective function on their smartphones. Seeing the huge approach for the satellite-oriented function the US manufacturer has also decided to jump into this field and bring reflective benefits to its consumers. Though Google initiated the satellite-related work in 2008 with a 3G + WiFi function on HTC Dream/T-Mobile G1). However, now it's time to add some advanced technologies to the latest arriving software. Now it's time to solely bring the Satellite Connections to users' hands. Google has confirmed Android 14 as the next version in their OS family. Things have started to run and make pace with time. Thus, we could see the next Android version in mid or late 2023. [Source]
